

**BABASAHEB AMBEDKAR TECHNOLOGICAL UNIVERSITY**

**LONERE – RAIGAD – 402 103**

**Winter Semester Examination – December – 2018**

**Course: B. Pharm**

**Semester: I**

**Subject with Subject Code: (Pharmaceutics -I (BP103T))**

**Date: 21/12/2018**

**Marks: 75**

**Duration: 3 hrs**

- Instructions:** i) All questions are compulsory  
ii) Figures to the right indicate full marks  
iii) Draw the diagrams or flow charts wherever necessary

**Q.No.1 Multiple choice questions**

**(20X01=20) Marks**

- The parts of prescription which contains name of the medicine, strength and quantity is called as  
A. subscription                      B. Inscription                      C. superscription                      D. signature
- If the usual adult dose of drug is 60 mg. What is the dose for a child of 6 yrs using young's formula.  
A. 2 mg                      B. 10 mg                      C. 20 mg                      D. 1mg
- 1 grain = ----- mg  
A. 50                      B. 60                      C. 65                      D. 75
- are sweet, flavored hydro-alcoholic preparations meant for oral administration.  
A. Elixirs                      B. Mouthwash                      C. Syrups                      D. Gargles
- Jellis can be classified as  
A. Lubricated                      B. Medicated                      C. Both                      D. None of these
- Semi-solid dosage forms are absorbed through skin by  
A. Passive diffusion                      B. Active absorption                      C. Osmosis                      D. Reverse osmosis
- Physical factors affecting incompatibility includes  
A. Insolubility                      B. Liquefaction                      C. Precipitation                      D. All of above
- Dusting powder is intended for  
A. Internal use                      B. External use                      C. Both a and b                      D. None of above
- $Child\ Dose = \frac{Age\ in\ month}{150} \times Adult\ Dose$   
A. Clarks rule                      B. Young's rule                      C. Fried rule                      D. Cowlings rule
- are not to be applied on broken skin.  
A. Liniment                      B. Creams                      C. Lotion                      D. Jellies
- Tetracycline taken with milk, is a type of -----  
A. Therapeutic incompatibility                      B. Adjusted incompatibility                      C. Physical incompatibility  
D. Tolerated incompatibility

12. 1 drop is  
 A. 0.05 ml                      B. 0.08 ml                      C. 0.06 ml                      D. 0.01 ml
13. Which was the first official pharmacopoeia of India?  
 A. 1945                      B. 1955                      C. 1948                      D. 1966
14. ----- is a biphasic dosage form  
 A. Douches                      B. Emulsion                      C. Glycerites                      D. Collodions
15. Symbol Rx refers to  
 A. Prescription                      B. Recipe                      C. Trademark                      D. Copyright
16. Simple syrup I.P. contain about -----% w/w of sucrose in water.  
 A. 66.7%                      B. 60%                      C. 64.74%                      D. 70%
17. ----- are liquid dosage forms and externally inserted into body cavity to promote defecation  
 A. Enema                      B. Suppositories                      C. Pessaries                      D. Bougies
18. ----- Bases are commonly used in vaginal suppositories  
 A. Cocoa butter                      B. Glycerinated gelatin                      C. Macrogol                      D. None of these
